Course Description: Feel the crisp mountain air of Brian Head as you leave the warmth of your lodge to see incredible vistas in every direction. What gifts will your morning surveys reveal; the flute-like song of a hermit thrush; brilliant colors of a western tanager; a tiny shrew? Or maybe the soft gray of the exotic flying squirrel? Professional biologists will guide your wildlife observations as you work together to gather important data in these pristine spruce-fir-aspen forests. Experienced teachers will help you translate your experiences for the classroom.

Time for your own explorations might mean back to the lodge for hot showers, lunch, then hiking, mountain biking or just viewing the red rock cliffs of Cedar Breaks, the green trails in the forests or the incredible black lava fields across Cedar Mountain. Decisions, decisions...and later on there is an evening interpretive program, a nocturnal hike or time for reflection.

Each day concludes back at the lodge enjoying great meals and camaraderie with other teachers and biologists - sharing treasures of the day, renewing your excitement for teaching and learning science.

What else will you take home? As a teacher-researcher you will learn survey techniques using state-of-the-art technology, such as determining location with global positioning units or identifying bat echolocations with computer bat detectors, and have access to these for use in your classroom. You will also learn to write field notes, analyze data, and prepare a final report; all important research skills to share with your students. Most importantly you will build confidence, connections, and a plan to develop partnerships with other teachers and biologists to design schoolyard research projects and involve your students in science. If you want further information check out the website; click the Brian Head Field Ecology link: <http://suu.edu/sci/biology>.

Motel, basic lunch materials, and dinner will be provided as part of the registration cost.
